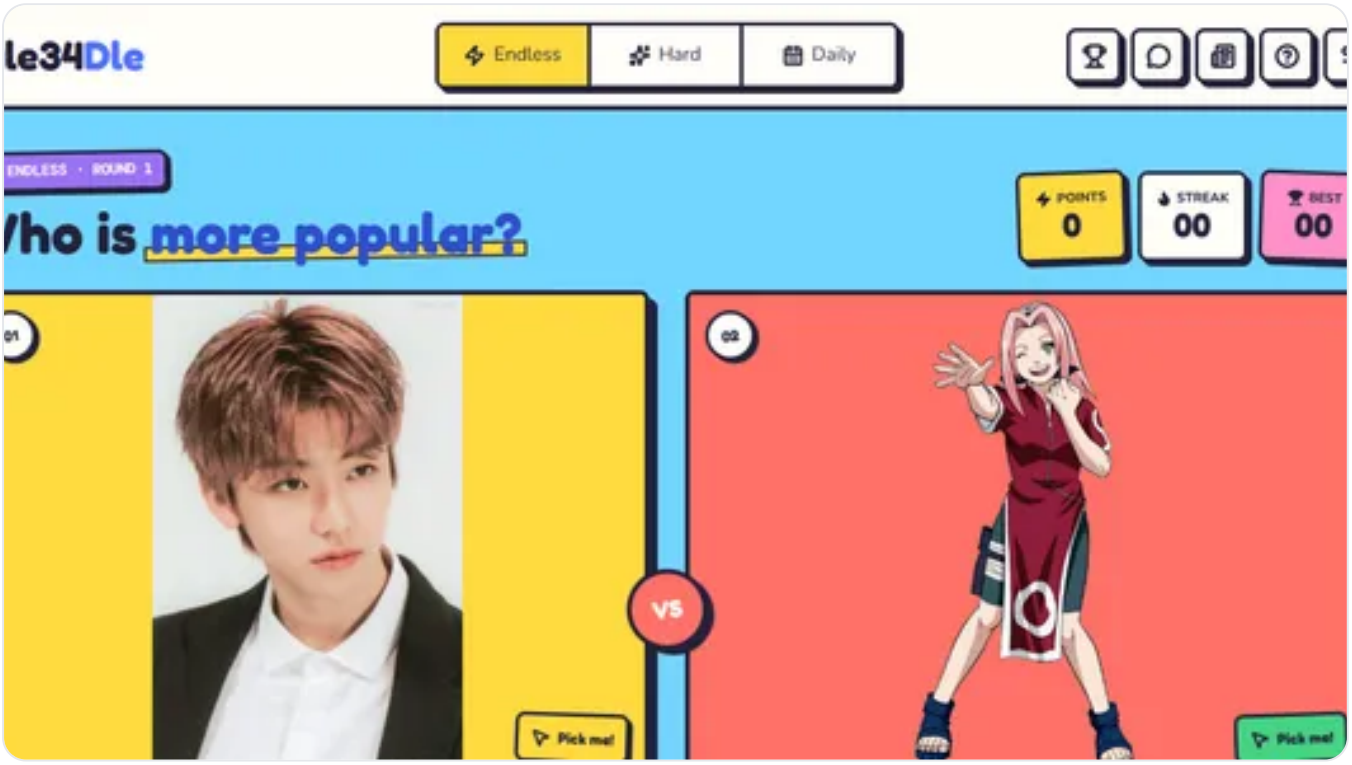
r34dle

Free character popularity guessing game with endless, hard, and daily modes.



About

r34dle is a free browser character popularity guessing game that lets you compare fictional characters and choose the more popular one. Built around a versioned popularity dataset, it offers endless, hard, and daily modes, automatic round progression, and score submission without requiring an account. The game runs directly at r34dle.net and supports English and Chinese.

What is r34dle

r34dle is a fan-made, independent character popularity guessing game that runs directly in a web browser. It presents players with side-by-side character matchups and asks

dataset. The game is free, requires no registration, and supports both English and Chinese. Players can switch instantly between endless, hard, and daily modes from the same homepage, and a displayed popularity data update date of August 8, 2026 indicates which snapshot powers the current rankings. Because all comparisons come from one shared dataset snapshot, every player sees consistent matchups during a given data period.

Key features

- Three modes without page reloads: endless mode shows one of two characters' scores as a clue; hard mode hides every score across three niche characters and adds a 2.5× difficulty multiplier; daily mode presents the same ten rounds for all players on a given day.
- Instant language toggle between English and Chinese.
- Streak, points, and best score tracking on the main game screen.
- Score submission at the end of an endless run.
- Supporting pages include leaderboard, guestbook, blog, about, data, privacy, and report-a-character.
- Versioned popularity dataset with a visible last-updated date of August 8, 2026.

How to use it

- Open the official site at https://r34dle.net/ in any modern browser.
- Use the mode switcher above the game to select endless, hard, or daily.
- In endless mode, compare two characters; one popularity score is shown, and you choose the character you believe has the higher hidden score. Hard mode presents three niche characters with every score hidden. Daily mode gives you a fixed set of ten comparisons.
- After each correct pick, the game automatically advances to the next round. A wrong answer ends an endless run and opens the option to submit your score.
- Monitor your points and streak at the top of the game. Switch to Chinese with the language control if preferred.

r34dle suits fans of casual browser games, higher-or-lower comparisons, and character ranking challenges. It is especially useful for players who want a quick session without signing up, for bilingual English/Chinese users, and for those who enjoy competitive streaks and daily shared challenge sets. The leaderboard and guestbook also provide a lightweight community layer for score sharing and feedback.

What to know before you use it

- Popularity scores are drawn from a fan-maintained, versioned dataset, not from official character databases or verified popularity metrics. The scores reflect the dataset author's snapshot and may not match other ranking sources.
- This game is for entertainment only. It does not provide authoritative character statistics, lore, or official popularity rankings.
- The hard mode's 2.5× multiplier applies to points, but the underlying difficulty depends on the chosen niche characters and the dataset snapshot.
- Daily mode uses the same ten rounds for everyone on that day; after completing them, you must wait for the next daily set.
- If you need official popularity data or character information, consult the character's official website, publisher, or a dedicated database rather than relying on this game.
- The site is independent and fan-made, and the reported dataset date of August 8, 2026 may be ahead of the current calendar date depending on when you play.

Overall, r34dle works best as a casual comparison game and should not be treated as an authoritative source for character popularity.

FAQ

Is r34dle free to play?

What are the three game modes in r34dle?

Do I need to register or log in?

Can I play r34dle in Chinese?
